“I screwed Paris Hilton” claims John Howard

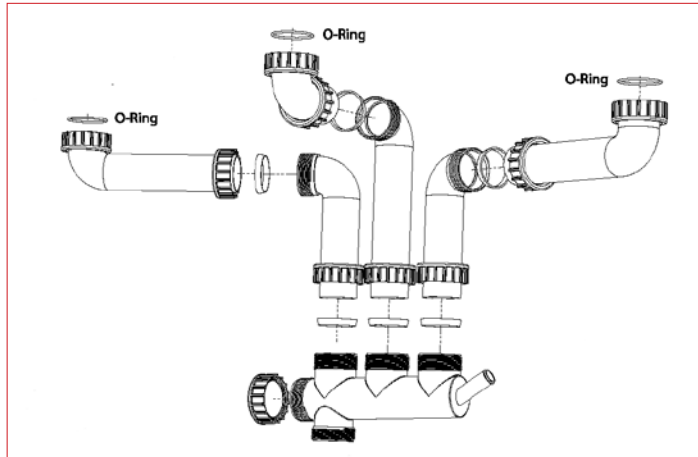

Clark Kent
Central Plumbing Agency

Sydney plumber John Howard says he was recently overcharged for the minibar during his stay in France, when he failed to get satisfaction from the management he knew one good way to get some payback. Just like when people in Sydney who don't pay their plumbers get their "backup", a few missing towels later and long after John had left the country the Paris Hilton's plumbing system was well and truly screwed.

Space Maker satisfies Katrina

Tim Lucas
Chief Product Analyst

Her name was Katrina, she seemed nice but her voice was soon to haunt all tradesmen who had worked on the job. Stuck at home she had little else to do but seek out the smallest of flaws ... she demanded more under sink space!

The hard facts

- The average kitchen in a new home is 30% smaller making under sink storage a necessity.
- The Art Plastics Space Maker frees up valuable under sink space and is easy to install.
- Adds value to any home.

The new Space Maker from Art Plastics came to the rescue! The Space Maker creates more room under the sink by getting the waste assembly up against the back of the cabinet, especially useful when a gas unit is also located inside the sink cabinet. The Space Maker can connect up to three bowls and adjusts in height and offset. Truly a space maker! Katrina was well pleased and loved its stylish silver appearance.

The Mystery of the Bermuda Grate

David Doerfer
Central Plumbing Agency

"Where does the water go?" Many people ask the same question and with the current water crisis it is reassuring to know that it is not disappearing at all. The water escapes past the tile insert where it then flows through the brass waste body to join the waste pipes just like a normal floor grate.

"Advertisements contain the only truths to be relied upon in a newspaper"

It's all about Water: The Mizu Long Grate

Scott Johnstone

Chief Development Engineer

The Mizu Shower Channel is the stylish new long grate designed to complement modern bathrooms. Channel grates are popular in line with

the trend to larger tiles, including porcelain, that are best laid in one plane to gain adequate falls. Traditional shower channels require complex and costly custom installation. The Watermark approved Mizu Shower Channel changes all this with its one piece body and associated Mega flex adaptor, ensuring installations that perform as well as they look! The Mizu Shower Channel comes in a 900mm long version that will suit the short side of about 90% of showers. The removal of the choice of custom fabrication makes life easier for everyone as the cost of custom fabrication and the delays commonly experienced are best avoided.

The 'LITE' version of the Mizu Shower Channel is only 300mm long and can deliver the same effect as the larger channel at a lower cost, and with fewer issues surrounding fitment. The lower price point of this product opens up a much larger market in competition with traditional round grates. Your clients will love it. The chosen finish, which is brushed chrome over D.R brass castings, has an austere appeal very much in line with the high end consumer who will choose this type of product. A bright chrome finish is considered too "bling." Available exclusively through Reece stores nationally.

The Hybrid Puddle Flange Vinyl Floor Waste....

- Design provides more functionality at a lower price
- Available in 80mm and 100mm in pipe sizes
- Bigger flange with greater bracing effect
- Bayonet grate means no visible fixings
- Solid brass clamp ring provides best in class pull down
- Incorporates unique temporary mortar exclusion device
- Security of glued connection
- Proven anti-bacterial quality of brass

ARTPLASTICS

Temporary solution for a Permanent Problem

Colin Jay

Senior Columnist

Temporary downpipe is now available in two sizes 100mm and 150mm for larger applications such as factories. Temporary downpipe will stop splashing water turning your site into a quagmire. The increased thickness of the Art Plastics product means UV stability is the best available. Use hose clamps on the 150mm to prevent the weight of water pulling the tube off the nozzle. Remember "once you've gone black you'll never go back!"

Husband catches best friend on balcony naked

Tim Lucas
Chief Product Analyst

Suspicious were aroused when John Smith of Liverpool came home early to find the local plumber Joe on his tenth floor balcony, examining the 100mm floor waste that was set into an Art Plastics Puddle Bend that reduced to 50mm within the thickness of the 150mm slab. When taken to task over the matter the

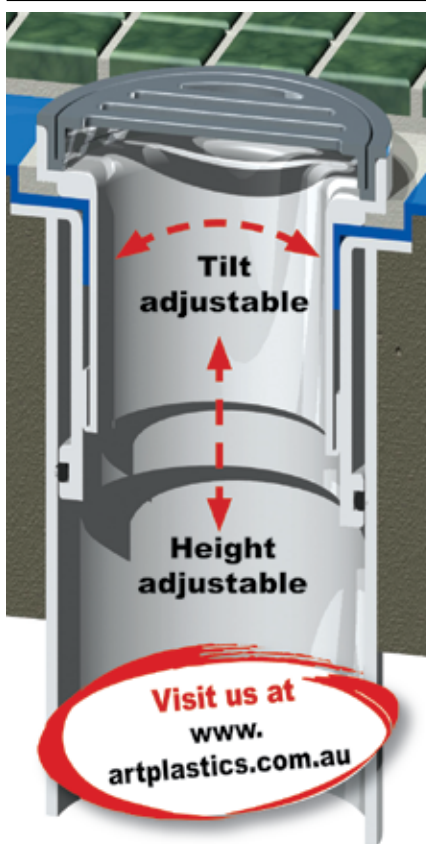

Plumber admitted that he normally used only a 50mm floor grate that got clogged up easily. He also admitted that other times the water on the deck just falls over the front, causing unsightly streaks down the fascia, but hey, that's the builder's problem! It was about then John found his trusty Labrador "Jeeves" hiding under the chair in the shade.

Joe The Plumber couldn't contain his excitement when he discovered the Art Plastics Puddle Bend!

Plumber's apprentice Miss June

No More Chipping Concrete!

Megaflexability is what you get with wastes designed with Waterproofers and Tilers in mind!

- Art Plastics Megaflex available in 50mm, 80mm and 100mm
- Grate sits lower for easy installation
- Height adjustable top for flexibility
- Undercap tear out section stops mortar and dirt falling in
- O-ring seal allows flange to sit flat to floor
- Watermark approved

100mm Classic Downpipe “5 degrees of separation”

Tim Lucas
Chief Product Analyst

The new Art Plastics 100mm Classic Downpipe is here. To install you simply glue the 95 degree elbows in stove pipe style over pipe. The Socket fitting provides a watertight seal suitable for charged lines. A full 5 degrees of fall avoids ponding of water in offsets that can harbour mosses. Provides greater drainage than 4x2 downpipes in skillion roofs. Watertight nozzle (gutterdrops) in 100mm are available to suit.

- New Generation “Invisible” joins give seamless look
- Efficient & Easy Installation
- Capture rainwater and still look good
- The Affordable Solution

Art Plastics Rainwater Head avoids “accidental rain bypass”

Scott Johnstone
Chief Development Engineer

The Art Plastics Rainwater Head is the original and best. Our design avoids “accidental rain bypass” sometimes encountered with sloping screens when leaves get plastered against the top screen causing precious water to get diverted out onto the ground instead of into the tank. The grille is easily removed for cleaning and stops mosses breeding in charged lines. The design is simple and functional and easy to install.

Rainwater Head

Rainwater Head Mesh

100mm Square Clearout: “it’s hip 2b²”

Colin Jay
Senior Columnist

The new 100mm square clearout from Bounty Brassware is hip to be square. Huey Lewis could have been a tiler in a previous life! Tilers love our square Bounty floor grates and now they can use the Bounty 100mm square clearout to match. Solid brass casting of the highest quality you have come to depend on.

Remember, when there is a fussy owner “Better Buy Bounty”

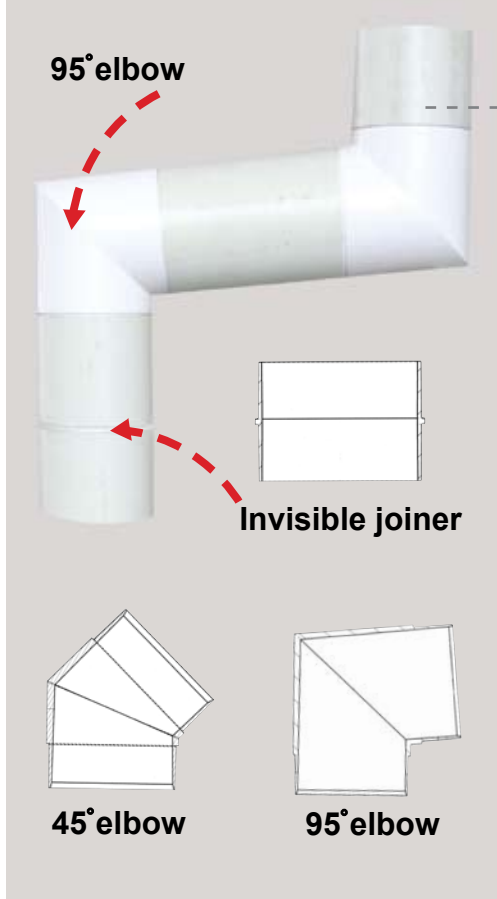

**“Proportion & falls are
Just Right”**

**“Gee that was
Easy to Install”**

**“Just what I wanted
Style & Quality”**

Art Plastics Sell Out Designbuild Show in 2006!

Clark Kent

Central Plumbing Agency

Art Plastics participation at Designbuild 2006 was a huge sell out success! The team worked tirelessly building relationships and peddling their wares. Here is a photo of a couple of our hardworking team members and a customer at our stand.

Howard Declares Nuclear Hot Water Systems for all Houses Obvious Solution to Global Warming!

Tim Lucas

Central Plumbing Agency

Asked which electorates he was placing them in, he said it was a clean green solution with a safer more friendly kind of nuclear energy. Mr Howard you didn't answer the question - What question? Which electorate will be the unwilling host to this reactor? All people in every electorate around the country will benefit from this far

reaching clean green policy and might I say that it will create opportunities for installers. Are you seriously proposing to place nuclear reactors in every house in Australia? No. You should have asked me where the reactor is to be sited. I did. Would you like to know? Yes please Mr Howard, I would like to know. Offshore. Oh really, like where Christmas Island or Naru? No further away. China?

No. Can you just tell us. Of course you only have to ask. Outer space. We calculate that the nuclear fission of the sun generates sufficient power to heat the water for all domestic hot water systems to make a significant impact on energy consumption even if its taking water from 10 degrees to 15 degrees - there is an energy saving being made. Is that our nuclear debate? Afraid so.
