“The Boot” Rainwater Head

Give leaves “The Boot” with the self cleaning
Art Plastics Rainwater Head.

Pat Pending

Features include:

- * Revolutionary self cleaning design (patent pending) lifts leaves off the screen due to the water's DLA (Dynamic Lateral Action) ensuring more rainwater is captured.
- * Low profile design requires less vertical height ideal for installation with tall tanks and suits all styles of home.
- * Fully visible snap-on filter screen ejects leaves, stops mozzies and is easy to clean.
- * Single screen design ensures no hidden blockages of secondary screen that cause water bypass.
- * Made from lead free, food grade, UV stable ASA - total peace of mind.

Please note:

The Boot has been designed as a self cleaning Rain Water Head, to achieve this you can expect to lose up to 20% of the water for the self cleaning action to be effective (as illustrated).

The water loose may seem visually greater but after extensive testing a 20% average loose can be expected.
